

# Short Course on Hologrammatic Terrorism

## Political Violence in the Communication Society

16 - 22 September 2010

### [ Topic ]

In a society driven by communication, imbalances that could favour terrorism are a real possibility.

Even a "small" terrorist attack could produce, through the media, a proliferation of chaotic images. This is the "hologram of terror" which lives in the cathode tube and feeds itself of the images it produces.

### [ Objective ]

The International Short Course on **Hologrammatic Terrorism** aims to provide students and young professionals with a comprehensive understanding and a detailed perspective on communication, geopolitical and social aspects related to the problem, and the evolution of terrorist groups in a globalized society.

### [ Methodology ]

By adopting a multidisciplinary approach, the Short Course is comprised of daily workshops offering interactions with renowned international experts on the most current topics concerning hologrammatic terrorism.

**DEADLINE FOR APPLICATIONS: 12 July 2010**

**unicri**  
advancing security, serving justice,  
building peace

**SAPIENZA**  
UNIVERSITÀ DI ROMA

**icac**  
International Counter-Terrorism  
Academic Community  
"It takes a network to beat a network"
